Unlocking India’s Multi-Billion Dollar Circular Economy

A **certified** direct-to-consumer marketplace transforming India’s informal e-waste crisis into high-value, pre-owned electronics.

Strategic Pitch Deck | Venture & ESG Partnership Brief

Gemini Notebook

THE 4.5 MILLION TONNE CRISIS & THE DRAWER SYNDROME

THE SCALE

India is the #3 e-waste generator globally, producing 4.5 million tonnes annually (expected to reach 5.5 million tonnes by late 2026).

THE BARRIER

Massive, high-value supply remains locked out of the circular loop due to a severe trust deficit regarding data privacy and unclear residual economic value.

THE TRAP

60% of Indian households hoard unused electronics. The average home stores three obsolete devices.

Specifically, **85%** of households hoard high-value laptops and smartphones.

Gemini Notebook

The Informal Monopoly Drives a Toxic and Inefficient Pipeline

The Default Collector

Over 90% of household e-waste currently bypasses formal recycling, going straight to local ‘kabadiwalas’ (informal scrap dealers).

The Economic Flaw

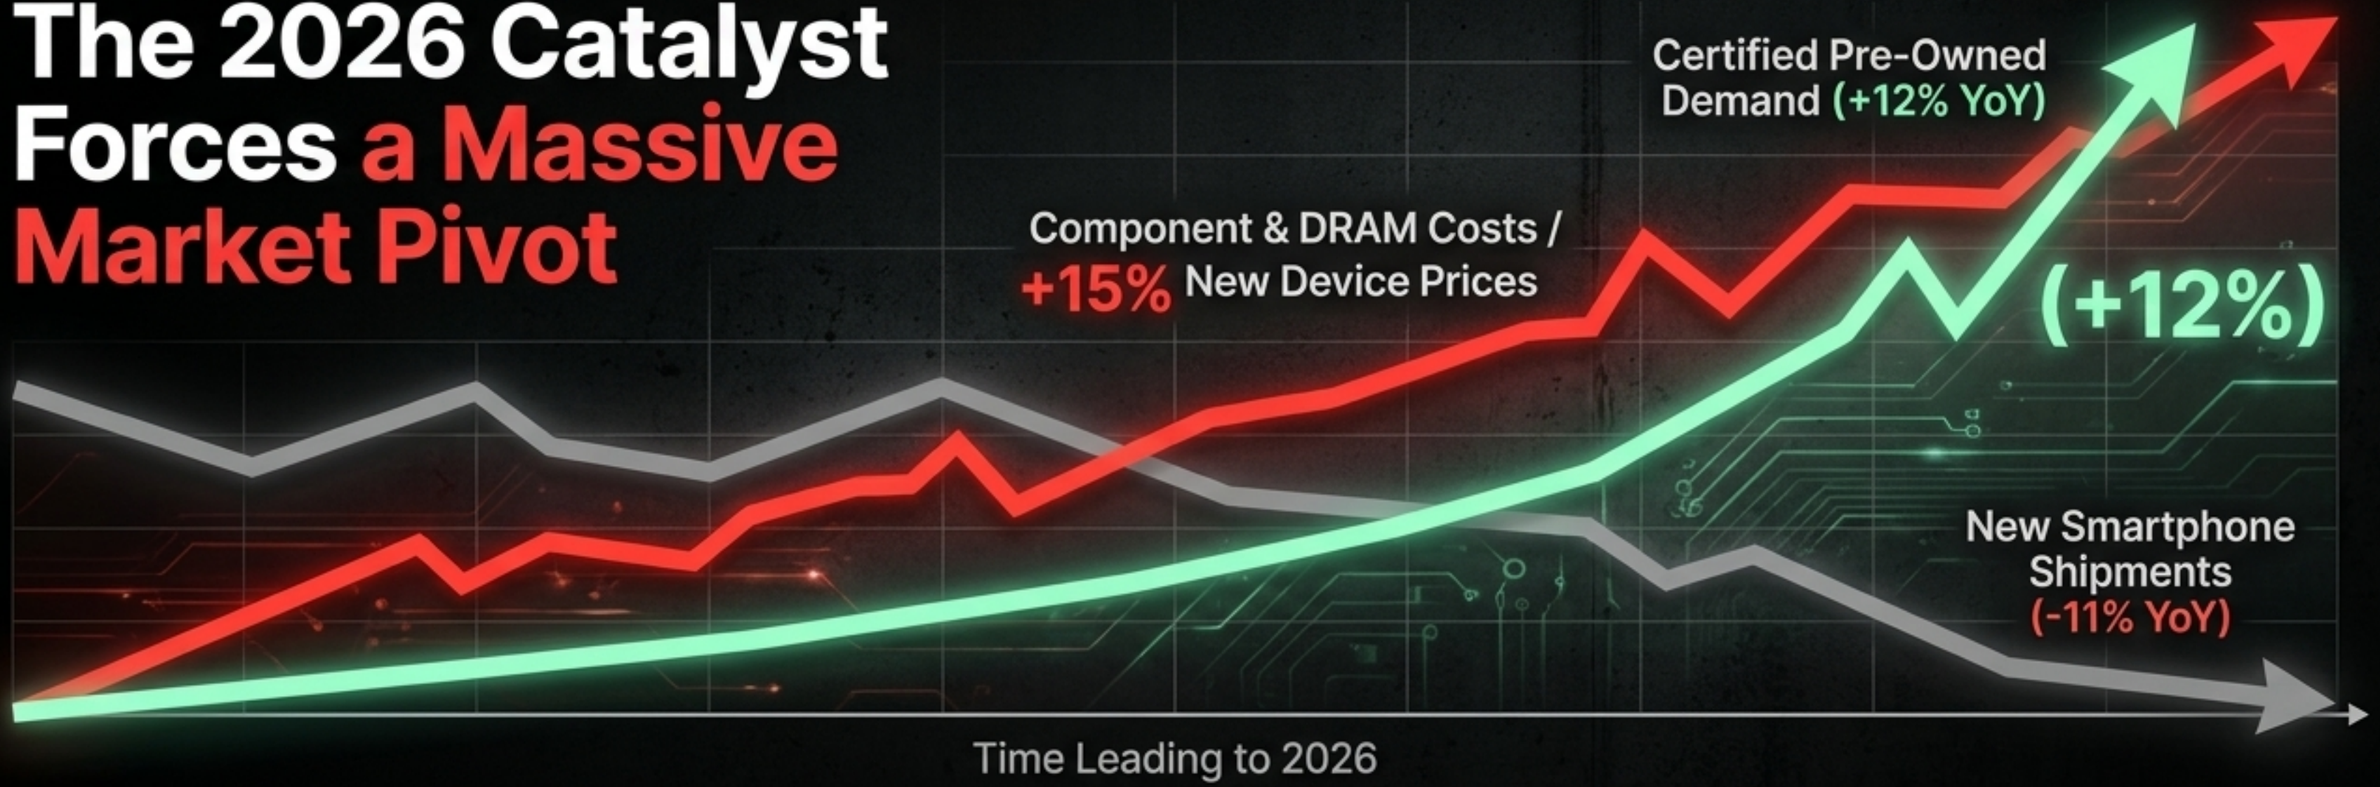

Consumers receive a flat, negligible rate (approx. Rs. 50/kg) for e-waste, destroying the value of functional components.

The ESG Disaster

Devices are manually stripped without personal protective equipment (PPE). The process offers zero data security and results in heavy toxic metal pollution, triggering severe health and environmental crises.

Gemini Notebook

The 2026 Catalyst Forces a Massive Market Pivot

MARKET FORCES: COSTS VS. DEMAND SHIFT

The Memory Shock

Rising primary component costs have pushed new device prices to record highs (Average Selling Price hit **$302** in early 2026).

The Consumer Shift

Price-sensitive consumers are abandoning the primary market. In Q1 2026, display panel shipments for refurbished smartphones **exceeded** new phone production globally for the first time.

The Regulatory Hammer

The E-Waste (Management) Rules mandate aggressive Extended Producer Responsibility (EPR) targets, forcing brands to hit **80%** recycling compliance by FY 2027-28.

Gemini Notebook

Trust as a Service: The Certified Refurbishment Marketplace

Military-Grade Data Wiping

Instantly eradicates data-privacy fears, giving consumers the confidence to unlock their drawers.

Trust Shield

AI-Assisted Diagnostics

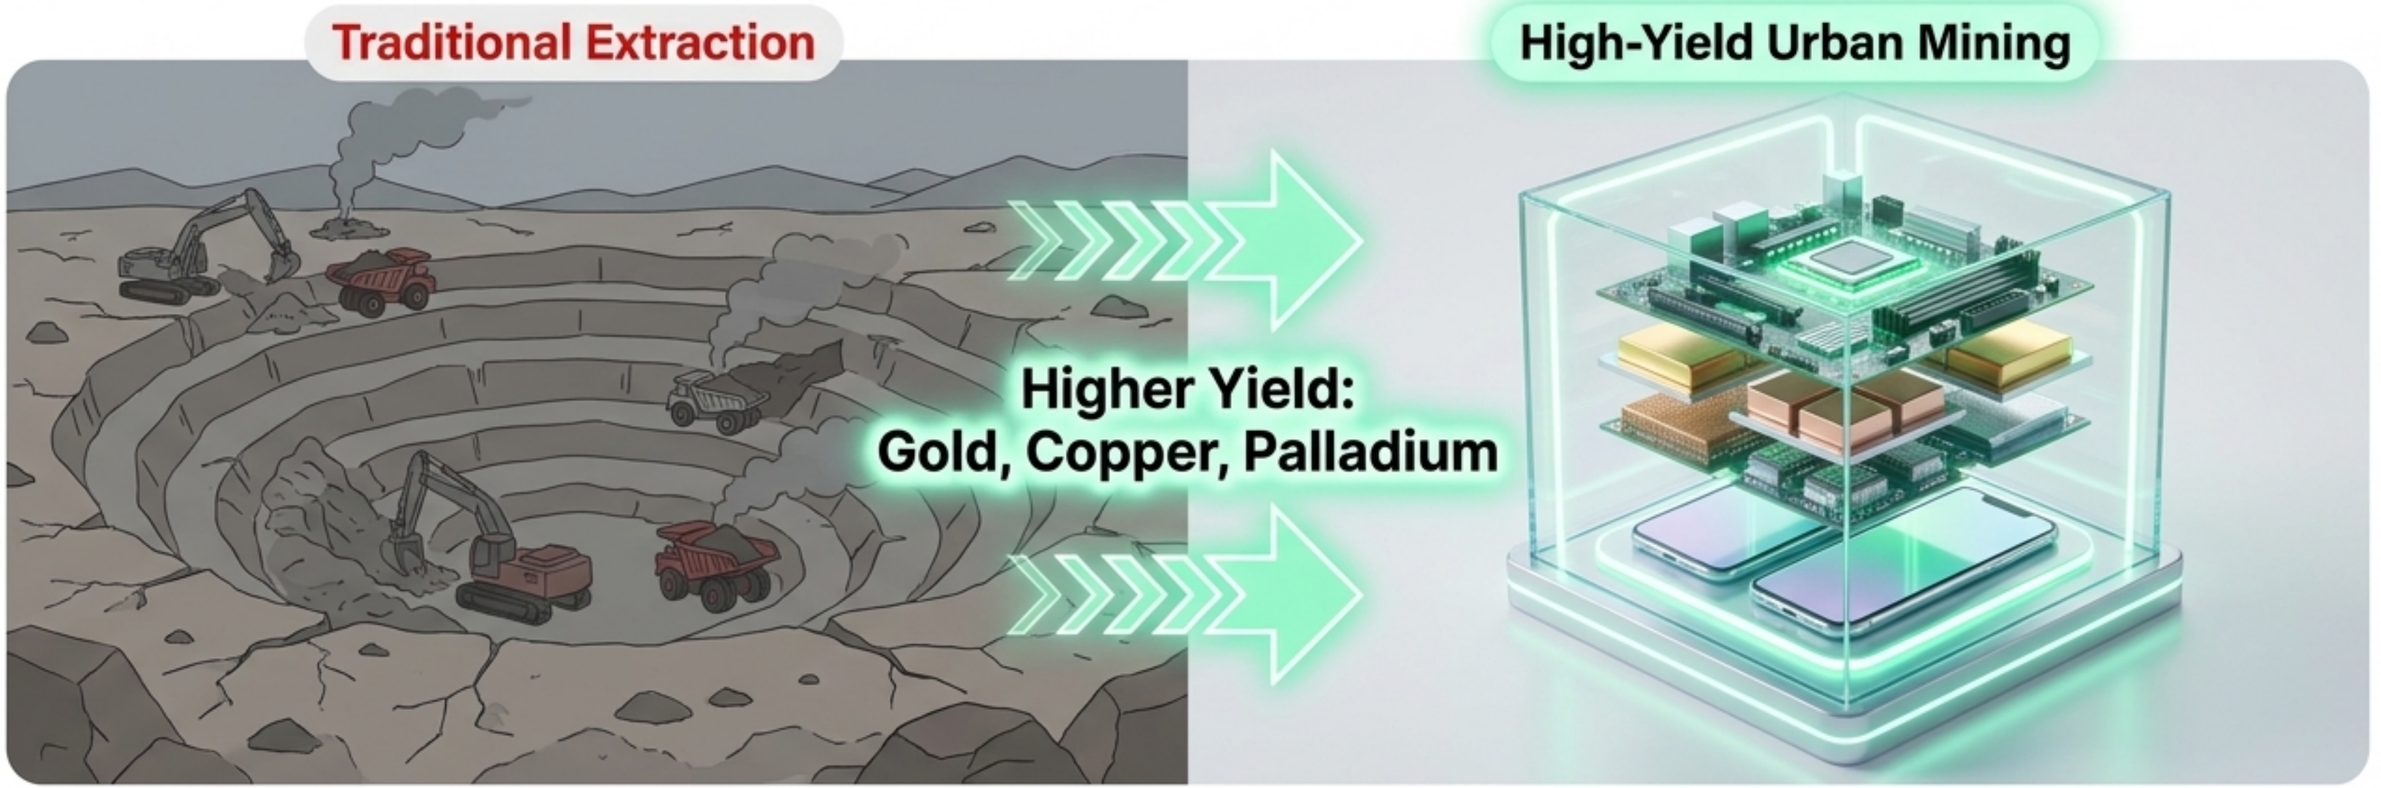

Replaces the flat Rs. 50/kg rate with fair, instant, algorithmic grading and pricing based on actual component value.

Retail Trust Anchors

Standard 6-to-12 month warranties with flexible EMI options normalize the purchase of certified pre-owned devices for the middle class.

Gemini Notebook

Environmental Alchemy Transforms E-Waste into Urban Gold

80%+

Decarbonization

Up to 80%+ lower carbon footprint compared to manufacturing new electronics from raw materials.

Critical Metals

Resource Recovery

Enables high-value "urban mining" of critical metals—Gold, Copper, and Palladium—currently trapped inside domestic e-waste.

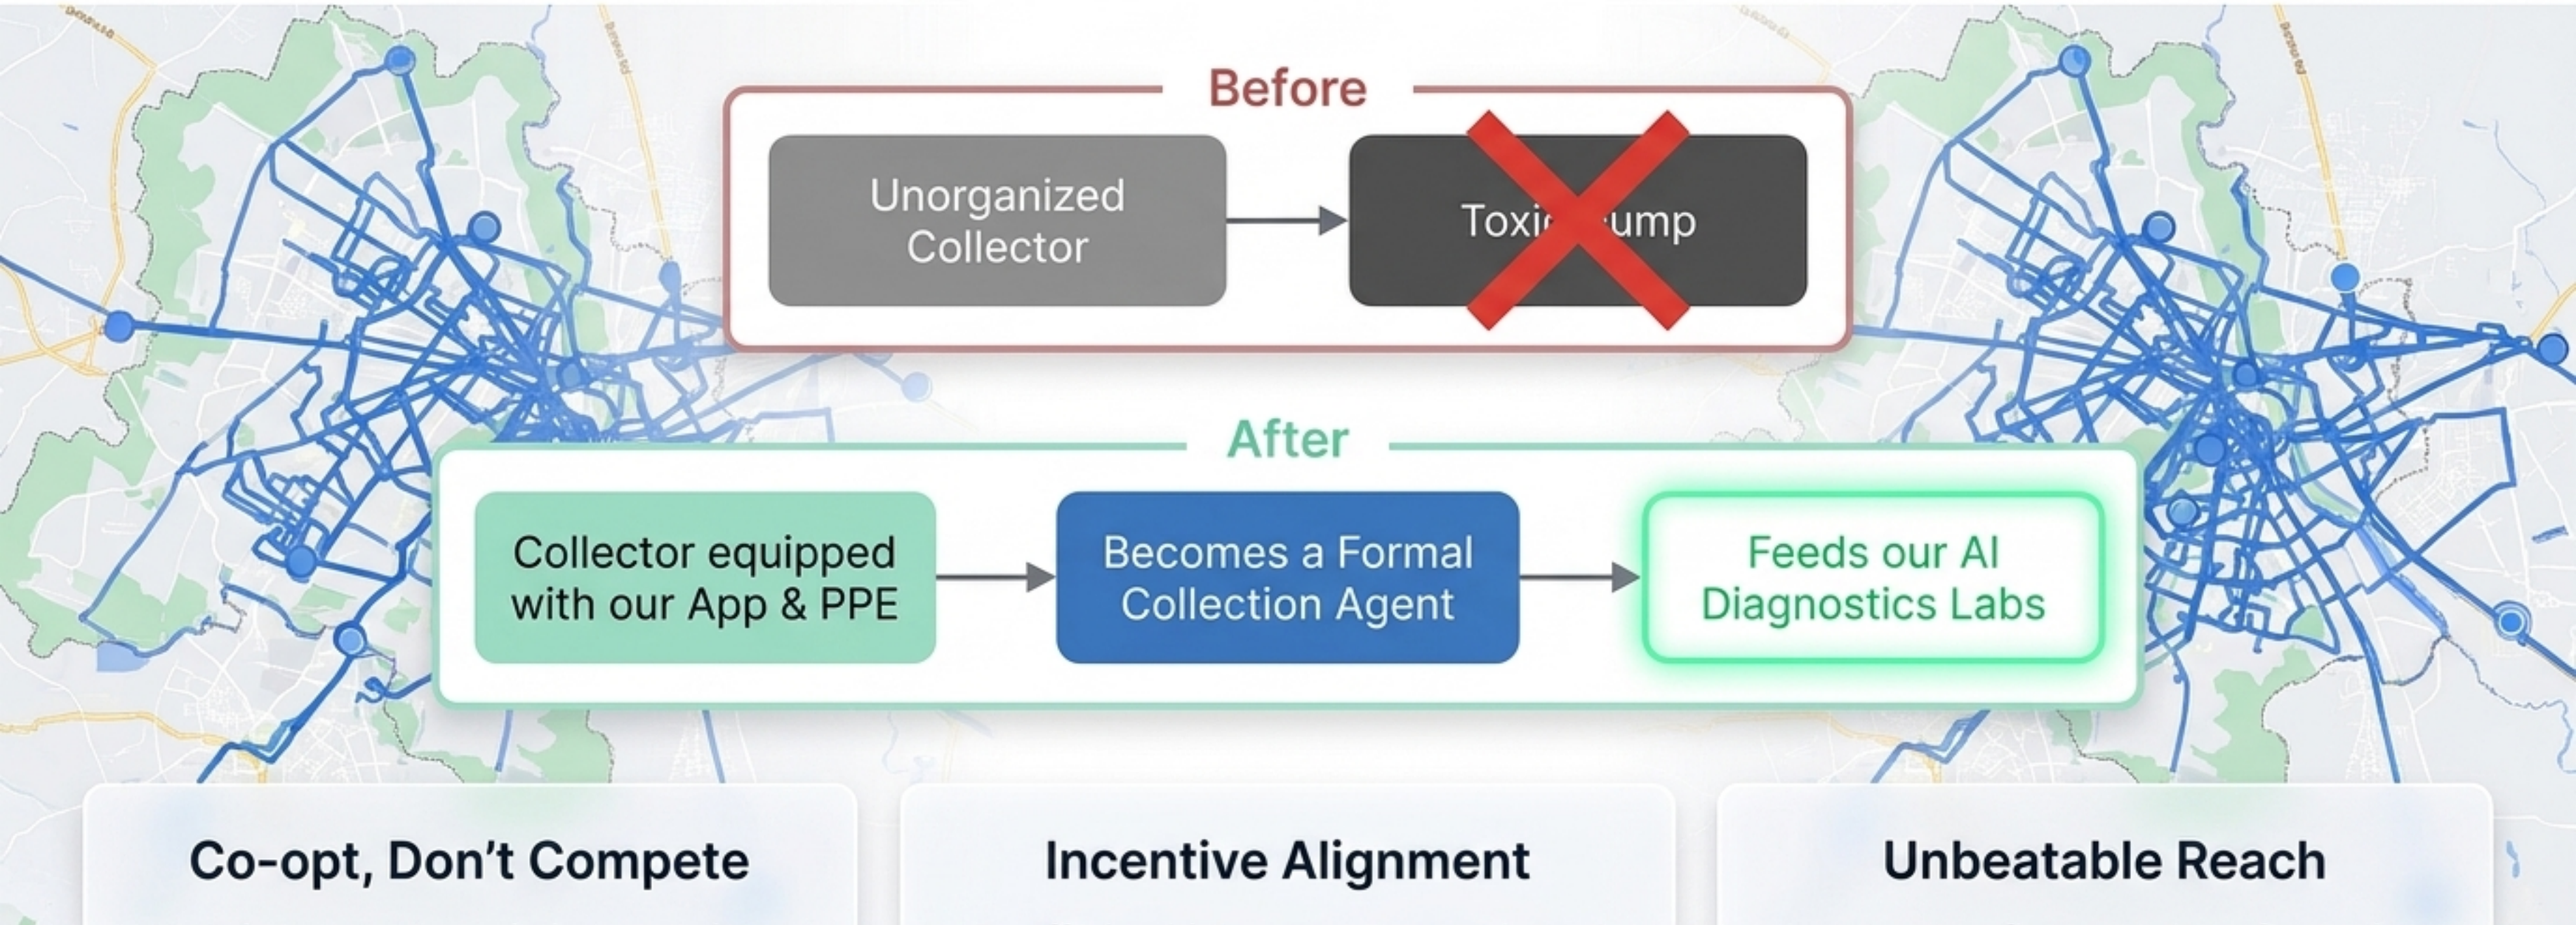

Zero-Landfill

Total Circularity

Transitions the informal, toxic dumping pipeline into a zero-landfill, closed-loop system offering pure ESG alignment for institutional investors.

The Ultimate Defensible Moat: Formalizing the Informal Fleet

Co-opt, Don't Compete

We integrate the existing, massive workforce of local kabadiwalas rather than attempting to out-spend them on logistics.

Incentive Alignment

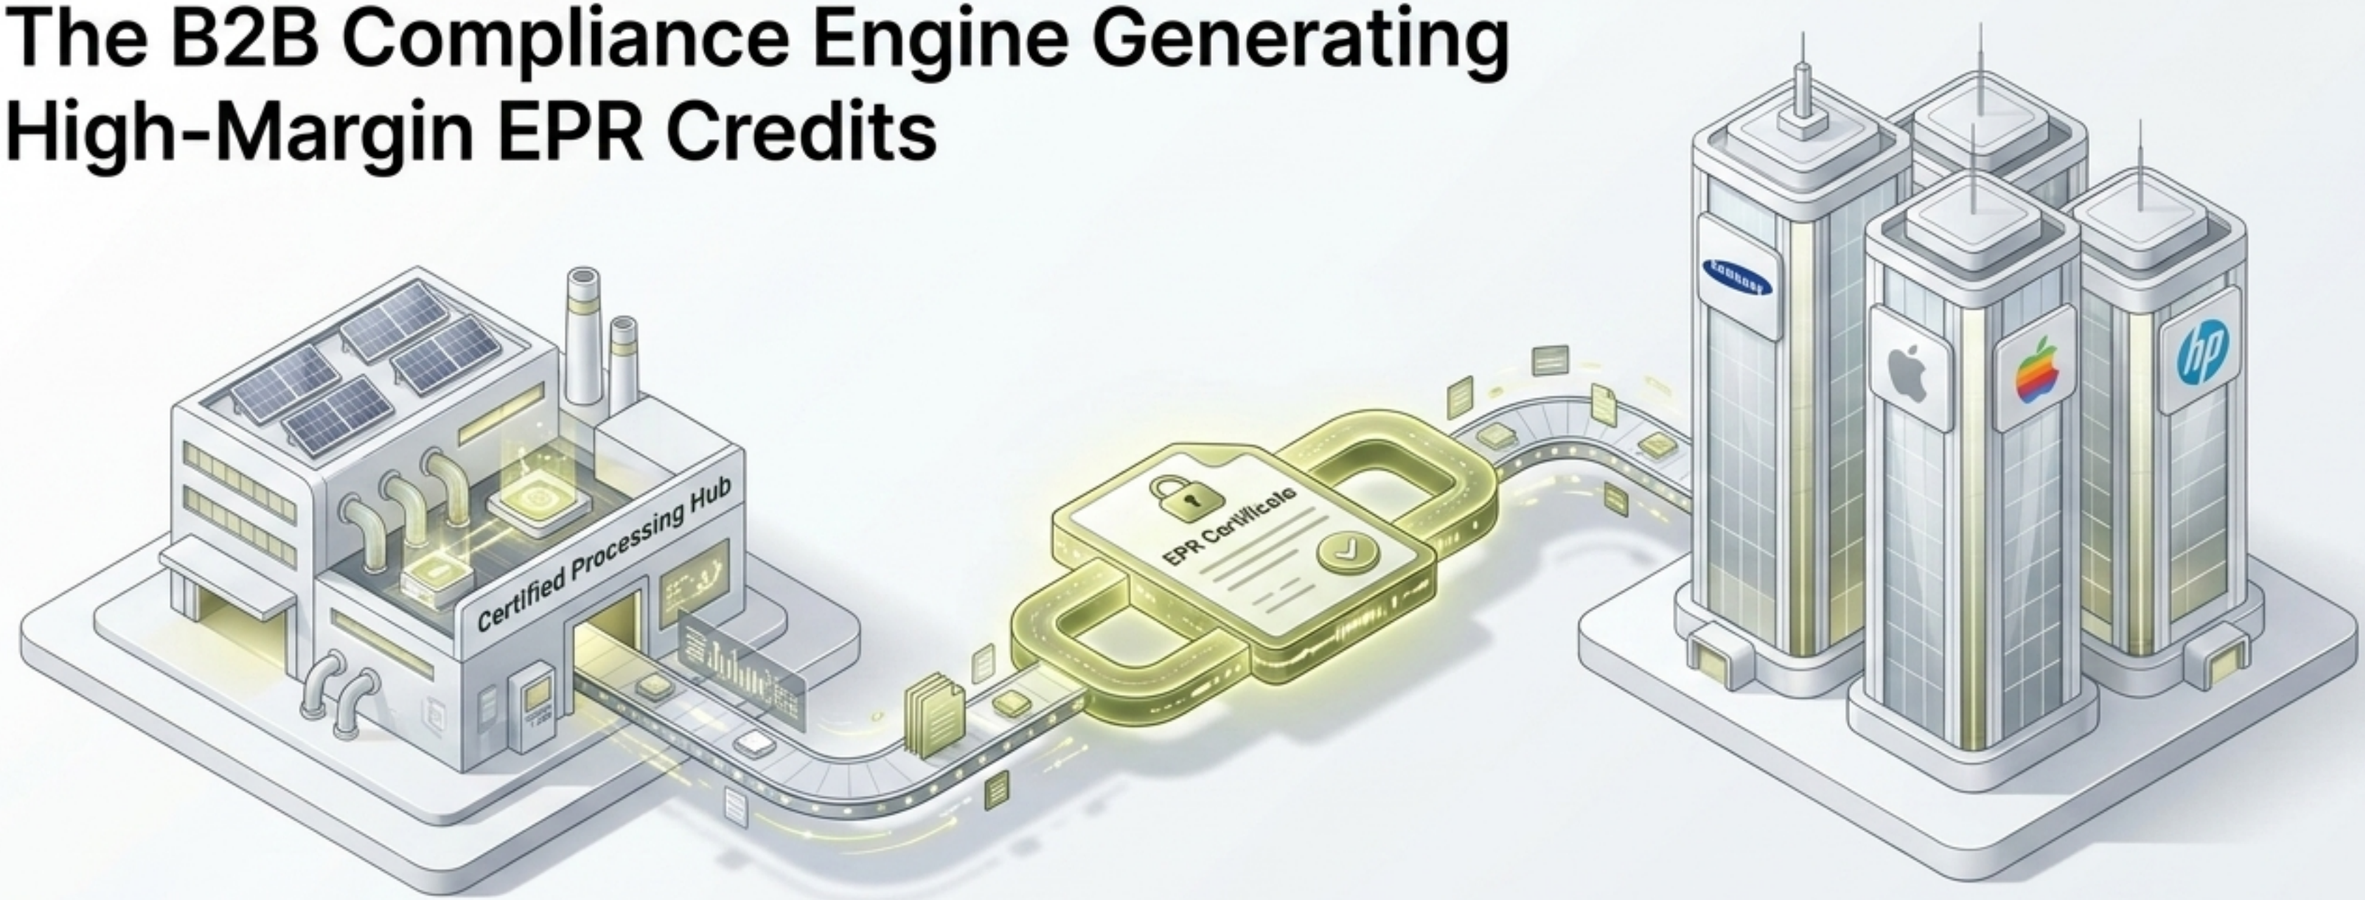

By offering higher, component-based collection margins and proper safety training, we instantly acquire a country-wide supply chain.

Unbeatable Reach

Leverages a fleet capable of traveling 20-30 km daily, penetrating deep into Tier-2/Tier-3 cities and residential neighborhoods where formal logistics fail.

Gemini Notebook

The B2B Compliance Engine Generating High-Margin EPR Credits

The Mandate

India's strict Extended Producer Responsibility (EPR) targets legally require brands to hit up to 80% recycling quotas.

The Bottleneck

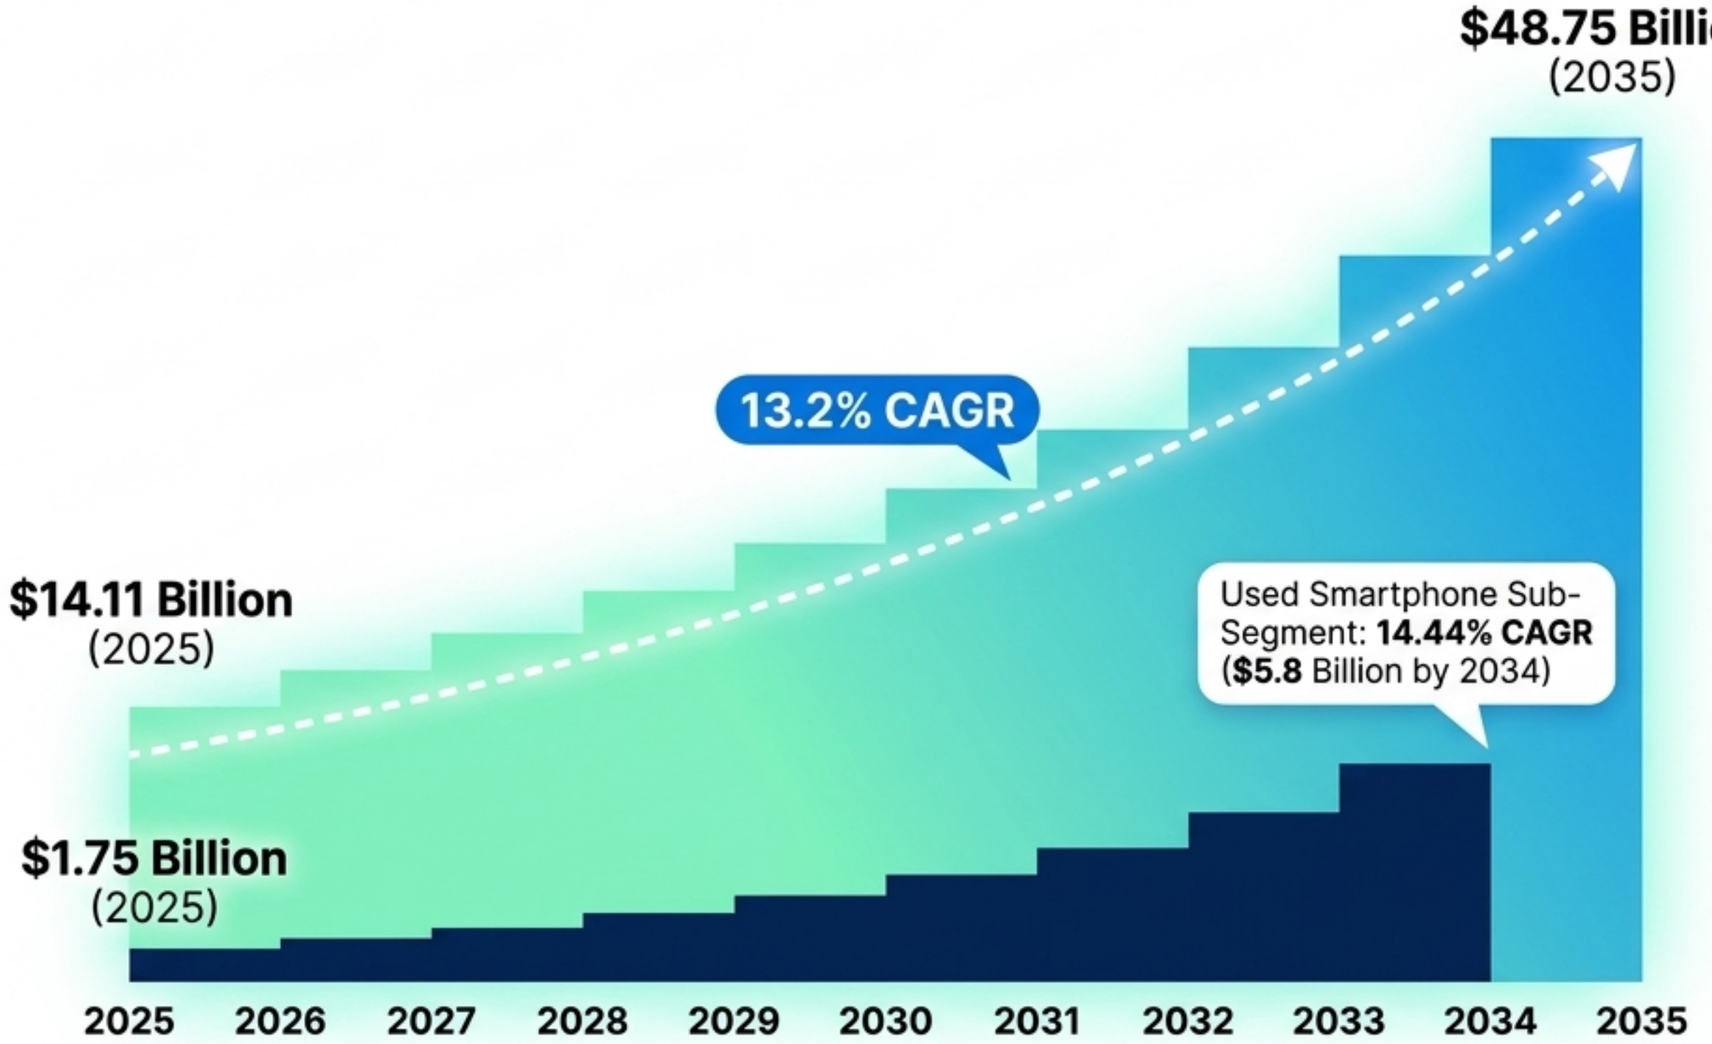

There are currently only 72 CPCB-registered formal refurbishers nationwide—a massive infrastructure deficit.

Our Positioning

By formally capturing and documenting the massive kabadiwala pipeline, we generate the highest volume of legitimate, auditable EPR compliance credits. We become the vital, inescapable B2B partner for OEMs.

Gemini Notebook

A Projected $48.7 Billion Circular Economy by 2035

Current Baseline (2025)

The Indian refurbished electronics market sits at a massive **$14.11 Billion**, with used smartphones alone accounting for **$1.75 Billion**.

Future Scale (2035)

Scaling rapidly to **$48.75 Billion** (Overall Refurbished) at a **13.2% CAGR**.

The Delta

The organized secondary smartphone market is currently only **4%** of the primary market's size, signaling unprecedented whitespace.

Gemini Notebook

Engineered for 25–30% Gross Margins via Margin Arbitrage

The Arbitrage

High buyback-to-resell price spreads are unlocked exclusively by our consumer trust anchors (Retail Warranty & AI Grading).

Cost Efficiency

Centralized, highly automated processing hubs drive down the per-unit cost of military-grade wiping and hardware repair.

Dual Revenue Streams

Stacking high-margin D2C hardware sales with recurring B2B enterprise compliance fees ensures profitability resilience.

Gemini Notebook

The Execution Path: India First, Global Next

Phase 1 (Months 1–6): Hub & Compliance

Setup the central Delhi NCR processing hub. Pilot the kabadiwala agent integration. Achieve baseline SPCB/CPCB regulatory compliance.

Phase 2 (Months 6–12): Digital Launch

Launch the D2C consumer buy-back application and the certified e-commerce storefront powered by AI diagnostics.

Phase 3 (Months 12–24): B2B & Regional Scale

Forge strategic OEM trade-in and EPR partnerships. Scale collection agents across Tier-2 and Tier-3 cities.

Phase 4 (Months 24+): International Expansion

Utilize the mature secondary electronics demand in the UK and EU by exporting premium processed supply from our Indian hubs.

Gemini Notebook

Leading the Circular Revolution

- We are transforming India's 4.5 million tonne e-waste liability into a highly profitable, 80% lower-carbon digital marketplace.
- We possess the macro tailwinds, the proprietary kabadiwala-integrated moat, and the AI technology to dominate the $48 Billion future market.

The Ask:
Seeking strategic partners and Series A capital to construct the Delhi NCR Processing Hub and launch the initial D2C platform.
